

STOP WASTING MAIZE

3 MISTAKES THAT
FARMERS MAKE AT
harvest

volac 

ECOSYL™

For consistently better silage

1 HARVESTING TOO LATE

Waiting until the crop
dies back?

That can reduce nutritional
value and increase spoilage
microbes.

TIP

Aim for 30-33% dry matter while
leaves are still green.

Ken Stroud, Volac Silage Expert

2 SKIPPING THE ADDITIVE

Thinking maize will
“conserve itself”?
Yeasts, moulds, and bad
bacteria say otherwise.

TIP

Use a dual-acting additive like Ecocool
to reduce losses by up to 20%.

volac 

ECOSYL™

For consistently better silage

3 CUTTING TOO LOW

Lower cuts = more
stalk, fewer nutrients,
and more bad bugs.

TIP

Leave 15 cm of stubble. Chop to
1.5–2.0 cm for rumen efficiency.

For consistently better silage

REAL-WORLD RETURN ON INVESTMENT

Maize costs
£700/acre.

Just **£24/acre** for
Ecocool can save up to
£187/acre in losses.

FARMER- PROVEN

**With the money you
spend on growing
maize, why skimp
on the last part?**

Mark Fritton, (Shropshire
Dairy Farmer) uses
Ecocool for silage that
stays cool and stable.
